

UK Renewable Energy Installers Database

The Renewable Energy Installers database is the first comprehensive database of its kind in the UK, produced by award winning construction industry data experts, Insight Data Ltd.

Thoroughly researched and updated by Insight Data's own in-house research team, the database brings together 4,505 companies who install solar PV and thermal as well as other renewable energy products such as wind turbines, ground and air heat pumps, biomass, and combined heat and power.

Those operating in both domestic and commercial sectors are identified, making it easy to segment and target installers precisely. The database contains full company details, primary contact name and telephone, with over 5,200 email addresses.

The database is ideal for manufacturers, distributors and suppliers of renewable energy products, electronic control equipment, plumbing/builders merchants, health & safety consultants, access equipment suppliers and training/accreditation bodies. It is also a valuable prospect tool for suppliers who promote their products and services to general builders, roofing contractors and construction firms.

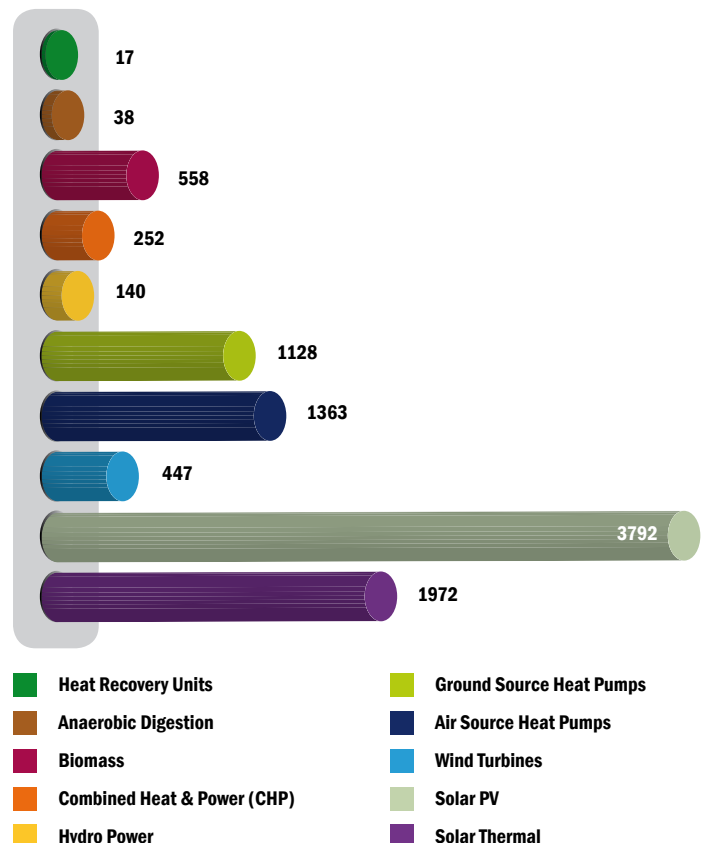

The database is continuously updated by Insight's research team, making this the ideal prospecting tool for direct mail, email marketing, telesales or as a contact list for your sales team. It is the most accurate and relevant database available for the UK renewable energy market.

The Insight Renewable Energy Installers database is the most comprehensive, accurate database ever developed for the UK **renewables sector include:**

- Solar PV
- Solar Thermal
- Wind Turbines
- Air Source Heat Pumps
- Ground Source Heat Pumps
- Hydro Power
- Combined Heat & Power (CHP)
- Biomass
- Anaerobic Digestion
- Heat Recovery Units

Installers by types
