

Welcome to the Salestracker Live Quick Start Guide.

Salestracker is an easy to use, effective sales and marketing tool for the fenestration and construction industry and gives companies a complete solution for generating leads and looking after customers.

Salestracker begins by giving companies live up to date marketing lists; continuously updated in the background by the Insight research team, giving our customers the confidence that their sales and marketing efforts are being seen by the right people.

The quick start guide contains an overview of the key features of Salestracker. If you require any further assistance please do not hesitate to contact a member of the Insight team.

Quick Search

Use the search box in the top right of Salestracker to search for an individual company. Search by company name, postcode, email, town, contact name or telephone number. This is particularly useful for sales reps if they are in an area and want to see surrounding companies by searching on postcode.

The screenshot shows the Salestracker Live dashboard. At the top right, there is a search box with a 'GO' button. A circular callout highlights this search area. Below the search box, the dashboard is divided into several sections:

- Navigation:** Dashboard, Build a List, Saved Lists, Tasks.
- My notifications:** New leads (0), My overdue tasks (0), My due tasks (0).
- My Salestracker (records):** My Data (33), Fenestration (UK) (14,218), Fenestration (Ireland) (765), Small Builders (21,506), Architects & Specifiers (8,653), Construction File (1,365), Renewable Energy (4,599).
- Insight Databases (records):** Fenestration (UK) (14,218), Fenestration (Ireland) (765), Small Builders (21,518).
- Relationships:** Database, Main Contact, Status, Category, Sector, Services. Includes a table with columns for 'All together' and 'Last 30 days'.
- Leads analysis:** Overview table with columns for Total, Open, Won, Lost, Open £, and Average £. Includes two gauge charts for 'Average days open' and 'Average days to "Won"'. Below the gauges, it shows 'Contact made' (0) and 'No pie chart data available'.

Build List

Build List enables you to create highly targeted lists based on a company's activity and geographical areas.

UK Fenestration allows you to generate lists based on a primary category; windows/doors, conservatory roofs, composite doors, sealed units and roofline.

Create a list based on company activity (fabricate, buy in and install then segment the data further on material (PVCu/ aluminium, timber) and product range (casement windows, bifolds etc,) and even select based on the profile and volume (recorded in frames per week)

Filter by market sectors (trade, commercial, domestic and new build) and also premises type (head office, showroom, trade counter, factory and depot)

Finally you can select geographical areas; national, regional, postcode or by selecting a mile radius from a specific postcode.

Saved Lists

Once a list has been generated you are able to save this list. Each saved list from the list builder works on the criteria being saved and not the results therefore, as our research team make changes to the database, your saved lists will be automatically updated. Please note it is advised that all lists ported over from Salestracker 2 should be rebuilt in Salestracker Live to incorporate new companies added to the database.

Next to each saved list (which has been created in Salestracker Live) is a View Criteria button allowing you to recap on what filters were used to create the list.

My Saved Lists

Tasks

These are created within an individual record and can be assigned to all users or a specific user who has access to Salestracker within your organisation.

By clicking on the Create new task button this allows you to enter a description of the reminder, assign a user, date and time and also gives you the option to be notified when the task is completed or overdue. There is also the option to remind the assignee leading up to when the task is due and this will come through as an email notification as well as appearing on the dashboard.

The screenshot shows a 'Create a New Task' modal form. It includes a text area for 'Description', a dropdown for 'Assign to' (set to 'All users'), a dropdown for 'Task type' (set to 'Select...'), and a 'Date/Time' field (set to '00:00'). There are several checkboxes for notifications: 'Send assignee email notification of task', 'Send assignee date/time email reminder', 'Email me when task is 24 hours overdue', and 'Email me when task is completed'. A section titled 'Include relevant contacts:' lists 'Trevor Johnson' with an unchecked checkbox. A 'Create' button is at the bottom right.

Relationships

This is an area where you can assign a record as being a customer, prospect, dormant customer, future prospect or other.

You also have the ability to assign someone from your company as an account manager to customers or a sales rep to prospects and categorise the companies according to value to your business with a bronze, silver, gold or platinum classification.

There are also two customisable fields in this section where you may want to include additional information relevant to your company.

The screenshot shows a record page for 'Fenestration (UK) | 1st Call Vista Ltd'. It has tabs for 'Business', 'Products', 'Activity', 'Leads', 'Tasks', and 'Documents'. The 'Business Details' section includes fields for Company Name, Trading as, Address, City or Town, Region, Postcode, Telephone No., Fax No., Company Email, and Website. The 'General Details' section includes ID Number, a link to request an update, Market Sectors, Type of Premises, and a credit rating. The 'Relationship' section includes dropdowns for Status (Prospect), Main contact (Unassigned), Category (Bronze), Sector, and Services. It also shows 'Potential spend: £0.00' and a 'Last CRM activity' section with a 'Save' button. At the bottom, there is a table with columns: Title, First Name, Surname, Position, Phone, Email Address, and Primary.

Title	First Name	Surname	Position	Phone	Email Address	Primary
Mr	Trevor	Johnson	Director			<input checked="" type="checkbox"/>

Leads

The Leads section gives users the ability to create a lead against a company regardless of who is assigned as the key contact in the relationship section.

Using leads is a great way of keeping track of any new or repeat business opportunities. Each lead is created against the company and automatically populates company name, contact and address information.

Users are then able to record against each lead, what stage of the sales process they're at, who is responsible for the lead, potential spend, where the lead generated from (website, reps etc.) and also the date the lead came in.

Campaigns

This area allows marketing teams to plan campaigns in advance and record in Salestracker the campaign plan (direct mail followed by email, adverts in trade press to correspond) and assign lists of prospects to the campaigns as well as the creative (sales letter, flyer, magazine ad etc.)

When creating a lead, sales reps are then able to flag that lead against a campaign and over time analyse response rates from each campaign.

Create a new campaign Filter campaign type: All Filter Campaign Summary

Reports

The Dashboard displays an overview of sales activity which pulls information from the Leads section. It gives the individual users a summary of their performance where as managers have the ability to see an overall view for the company. There is also an advanced report section which appears under Track Activity which allows a more detailed report to be created.

Databases

Switching between databases can be done through the quick search (top right corner) or on the Build a List Page top right under the toolbar. As each database has different information contained within at present the option to search two databases simultaneously is not available.
